

Altima Fibre

a division of Altima Telecom
achievements 2019-2020

History of Altima

Founded in Montreal over 25 years ago, we started as a pioneer Internet service provider specializing in telecommunication services for corporations.

In 2004, we reshifted our focus towards residential customers and achieved rapid growth. In 2017, Altima Fibre was born, and we began the construction of our underground Fibre network as well as the connection to multi-dwelling buildings in Montreal and surrounding regions.

Altima Telecom is now one of Canada's leading independent and alternative telecommunications providers. We provide high-speed internet, TV and phone services in Quebec, Ontario, Manitoba, Alberta and British Columbia.

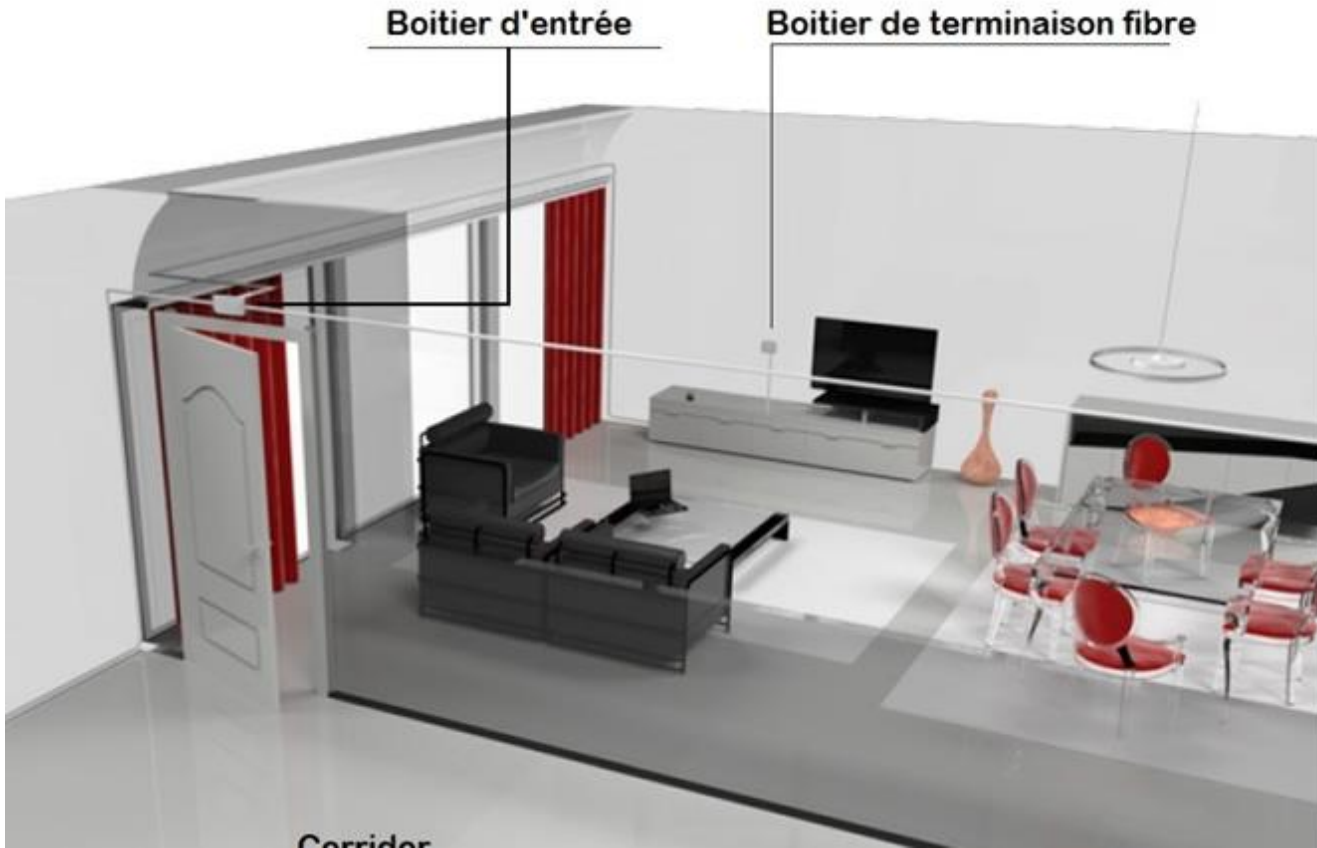

Altima Fiber

Altima Telecom wishes to offer its customers telecommunication services at the cutting edge of technology with the construction of its own fibre optic network.

- Competitively priced internet services
- Democratizing Internet speeds
- Offer a new alternative to other suppliers
- Deploy an independent & dedicated network for ILM/MDU
- Deploy the best technologies in existing buildings

We install the fiber in new buildings of 35 units up to towers of more than 1000 units.

Another Altima solution

Fiber installation Unobservable (invisilight)

Solution of a powerful and
invisible technology

To enable fast optical signals to be routed in environments that do not allow traditional cabling installation, Altima is able to offer optical link installation techniques with minimal visual impact.

The use of a micro optical cable that is difficult to perceive, whether in the corridor or in customers' private locations, is used to enable Altima to offer its services without altering your decor.
